DWA_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

When converting the book preview to a component, I encountered challenges related to defining the component structure, data binding, event handling, and ensuring smooth interaction with the rest of the application.

2. What parts of encapsulating your logic were hard?

I would say encapsulating my **bookpreview** was hard mainly because i couldn't quite grasp the concept of encapsulation in my logic for the **bookpreview**

3. Is abstracting the book preview a good or bad idea? Why?

Abstracting the book preview is a good idea because it promotes reusability, maintainability, and modularity in your code, making it easier to manage and scale your application.
